## Medicine entrance exam questions answers

The MCAT admissions exam is considered one of the most difficult academic tests available. This is the official test a person must pass to get into medical school in the United States. Some medical colleges in Canada also use the exam. An MCAT test research guide with actual questions developed and under supervision by the Association of American Medical Colleges, it is given about 14 times a year at prometric testing centers, located in cities all over America. MCAT has been in use for 75 years, and every year over 70,000 people take the exam, even though there are only about 20,000 vacancies for new medical students each year in America. MCAT has recently undergone some major changes. First of all, it takes almost eight hours to complete the exam (the old one took about five hours). Second, the essay, or writing sample, was completely deleted; Medical education experts said it was no longer very useful in predicting success in medical school. Third, a completely new section was added to find out which test subject has the talent and understanding necessary to provide medical services across many cultures and sociological groups. This section added that, due to the rapid and massive demographic changes taking place in America, making MD these days requires skills that doctors of previous generations never needed. Finally, the old MCAT was offered 25 times a year, but the new MCAT is only offered 14 times a year. There are four sections in the examination:critical analysis and thinking skills (53 questions/90 minutes time limit)Biological and biochemical elements of life systems (59 questions / 95 minutes time limit)Chemical and physical elements of biological systems (59 questions / 95 minutes time limit)New section, Psychological, social and biological elements of behavior (59 questions/95 minutes time limit)MCAT preparation and review all questions are multiple choice. MCAT is not an adaptive test, which means that a student cannot shorten the length of the test by answering tougher questions properly. Each section scores separately, and these scores are combined to create a total score of the grades in the section range from 118 to 132, and the overall score ranges from 472 to 528.Most students take the MCAT in their first or last year of college. It's important to take it in time to get the grades available when one starts applying to medical schools, but it's also important not to take the test before one is ready, as a low score will be a serious handicap when it comes to winning admissions in medical school. Because the number of openings in medical schools each year is very limited, and is dwarfed by the number of people who want to enroll, the admissions process is highly selective. In elite medical schools, the process is highly selective, and only students with MCAT scores and scores at the highest levels have a chance Competition is fierce, and it gets harder every year. There may be some relief on the horizon, as there is talk of some more medical schools opening up in the not too distant future. If that really happens, getting into medical school might be a little less difficult. Even then, though, it won't be easy, and the best way to maximize one's chances will still be to earn a high score on MCAT. MCAT Research Guide Explore our free MCAT review provided by Mometrix.
